This topic graphines factors that influence our tendency to done and conform. We often observe others in social schools and try to givess why they behaved that way. For example, you may extress your friend acting differently with their forms than they do with their friendship group group. This may be because their terms expects good behaviour tast the friendship group has different expectations. Social pays holicys inverses a ligorous and scientific investigation of these affiliates and behaviours, going supplied to posture and scientific investigation of these affiliates and behaviours, going supplied to posture and scientific investigation of these affiliates.

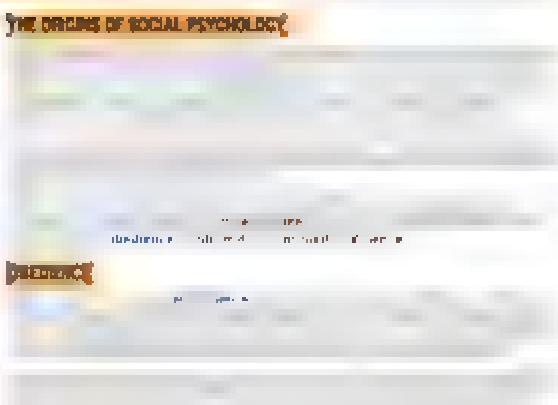

in this topic, you, will tisp learn about specific research that has been comported in social paychology. Finally, these will be the opportunity to conduct your own research who a topic research to the appropriate to the appropriate to the appropriate to the appropriate.

TOPIC B COGNITIVE PSYCHOLOGY

Cognitive psychology is the study of the role of cognitive processes in human behaviour Cognitiviets sludy mental processes, such as perception, memory, attention, language and problem solving. This is to indenstand how we view, interpret and respond to our works.

An important development in the rise of the cognitive approach was the advent of the computer age. The computer gave cognitivests the metaphor for understanding the human brash and the ferminology to explain mortal processing more easily. The computer analogy likens the brain to a computer in element by a storage system that recomes information from its constraint, processes the information and gives or origin. The computer hardware resembles the structural features of our brain and the software resembles the structural features of our brain and the software resembles the structural features of our brain and the software resembles.

Experimental countries psychology is the study of human mentar functioning in a cantrolled toboratory softing. It used experimental tests to determine functioning. Cognitive science is a field that is concorred with mimicking human cognition in a computer program, modelling computer simulations and affering computational models for various espects of cognition Cognitive neuropsychology is the study of partients with brain damage to determine the impact of the damage or copacity and functioning. These studies have been particularly important in understanding the cognitive function that we refer to as memory

ACAPTE CAMERA ACAPTE CONTROL AND APPLEAD THE CONTROL A

TOPIC C BIOLOGICAL PSYCHOLOGY

Biological psychology aims to make a direct link botween the normal functioning of the body (physiology) and behaviour. In this tapic you will explore different blological factors such as gones the brain hist hormones, and low they relate to human behaviours such as appression. You will also explore the nature of body divitims, how they are regulated by internal and external factors, and learn about different body rhythms such as the sleep-wallo cycle.

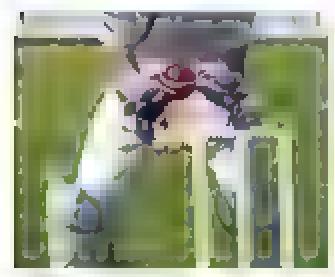

Biological research uses completions brain-scanning techniques and twin studies to understand the biological tasse of human behaviour. You will study these in context as you learn about the classic study by Paint with used trains scans to investigate the brain activity of murdururs, and Brandgen's twee study of aggression. You will also have an opportunity to put into practice your knowledge of consistional research when you conduct your own practical investigation into apgression or body rhythms.

JNIT 2 BIOLOGICAL PSYCHOLOGY, LEARNING THEORIES AND DEVELOPMENT

TOPIC D LEARNING THEORIES AND DEVELOPMENT

Learning can be defined as a process that leads to retailively stable behaviour change. When we team, we change the way we interpret information and pillimpoly the way we interpol or behave. Learning theories are essecuted with the behaviourist approach and the work of pioneering psychologists such as John B. Walson 1678-1958). B.F. Skimer 1994-1990) and Albert Bandura 1925-2021, who believed that the focus of psychology should be on observable behaviours. because internal moods of thoughts are foo subjective and un estable. This approach dominated early 20th-century psychological research.

coarming droory remphasiscs—numbers and understanding from activation is shaped by the environment amount us inther than blological mechanisms within as (nature). By noting how behaviour is shaped by any important rather than blology, such through single emphasise the way in which a human baby is of octively tabula russ, meaning a blank state, which external forces can then shape and mould accordingly in this topic we will explore three different theories which suplain how we ream new behaviours through association, consequence and observation
